

Using ARIS for student success!

Presented by Paul Alan Pelech
Technology Coordinator

What would you say if
you were asked:

• How do you
differentiate
instruction in your
classroom?

What would you say if
you were asked:

• How do you use
student data for
student
achievement?

What would you say if
you were asked:

• What tools are
available for you
to gather student
data?

In groups of 3, please
use ARIS to complete
the following tasks:

- Identify students in your class who are taking the regents for the first time.
- Which students failed by 10 points or less?
- Which students passed by 5 points or less?
- How would you use this information so the students are more successful?

Thank you, together we
can make a difference.

Student success first!
